

Connectivity for use in Multi-Site, Multi-LIS and Multi-workstation environments

No matter how your lab is currently configured, Data Innovations' middleware has the connections you need to interface automation, instrumentation, information systems and locations.

Notifier Alert

With Data Innovations' unique, powerful Notifier application, you can customize the system to send a message to designated recipients whenever a defined event is triggered. (For example, if a connection has an error condition.)

Is your lab **IM**powered™ ?

Proven history of success in thousands of lab locations

Over time, we've worked with nearly every LIS/HIS and diagnostic equipment manufacturer. Our experience translates into faster, easier installations for you – even if you need to connect more than one LIS or more than one site. Plus, our Thin Client application enables you to use your current Windows®-based computers to access Instrument Manager and your information.

- Library of 700+ drivers for LIS and instruments
- Interface instruments to multi-LIS systems concurrently
- Capacity for 200+ instruments per system
- Use one system to support multi-locations
- Multiple connectivity options: TCP/IP, serial, LAT, File I/O, ODBC and more
